New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a specified N-terminal domains, rod repeats, utrophin or a specified N-terminal and dysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, dystrophin minigene; muscular; gene therapy; utrophin; s

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, HI and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operably linked to an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker miscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a muscle creatine kinase (MCK) promoter and a small polyA signal sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TCCTTCACAGCATTTGGAAGCTCCTGAAGACAAGTCATTTGGCAGTTCATTGATGGAGAG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene; HI and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is human dystrophin minigene delta399 containing nucleotides 1.1668 (N-terminus, hinge HI and rods RI and R2), 8059-10227 (rods R22, R23 and R24, hinge H4 and CR domain) and 11047-11058 (dystrophin last 3 amino acids)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TAATATTCTACAATTGGGAAGTAAGCTGATTGGAACAGGAAAATTATCAGAAGATGAAGA 360

Example 1; Page 59-60; 71pp; English

The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, HI and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a muscle creatine kinase (MCK) promoter and a small polyA signal sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2280
The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, H1 and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) element. The dystrophin minigene operably linked to an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a cytomegalovirus (CMV) promoter and a small polyA signal sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              600

                                                                                                        à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to an isolated nuclectide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, HI and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (BMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a muscle
                                                                                                                                                                                                                                                                                                                                                                                                               New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain or modified N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin

The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, H1 and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (BMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a
                                                                                                                                                                                                                                                                                                                                                                       New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain or modified N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cytomegalovirus (CMV) promoter and a small polyA signal sequence

New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin

Example 1; Page 70-71; 71pp; English.

The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, HI and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a muscle creatine kinase (MCK) enhancer, a cytomegalovirus (CMV) promoter and a small polyA signal sequence

Use of spontaneous or automatic protein splicing to join two or more peptides at junction site involves expressing extein peptides having coreacting portions of split intein attached to them, so that peptides splice.

Example 1; Fig 2; 81pp; English.

The invention relates to a method directed to the use of spontaneous or automatic protein trans-splicing to join two or more peptides at junction site. This method involves expressing extern peptides having co-reacting portions of split intein attached to them, so that peptides will splice automatically under suitable conditions. The invention also provides methods for circumwententing virion packaging size limitations in recombinant virus particle, by splitting a coding region for a protein to be delivered into two or more extein genes, which are packaged in separate virus particles and are co-delivered in a target cell for the protein. In particular, the method is used for trans-splicing the complete protein. In particular, the method is used for trans-splicing human dystrophin and in gene therapies of recombinant adeno-associated virus (AAV) particles that encode trans-spliced dystrophin, for treating diseases such as Duchenne muscular dystrophy (BMD). The present sequence is human dystrophin gene (Becker

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, H1 and H4 domains and oysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene perably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (DMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human, dystrophin minigenes, a muscle
                                                                                                                                                                                                                                                                                                                                                         New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes a composition comprising a mini-dystrophin peptide comprising a spectrin-like repeat domain, where the domain comprises n spectrin-like repeats, and contains no more than n spectrin-like repeats, where n is an even number between 4-24, or a nucleic acid encoding a mini-dystrophin peptide. The mini-dystrophin peptide or the polynucleotide encoding it is useful as a medicament, for preparing a drug for therapeutic application and in the preparation of a composition for treatment of muscil disease, e.g. Duchenne's muscular dystrophy (DMD). This sequence represents a mini-dystrophin sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

The invention describes a composition comprising a mini-dystrophin peptide comprising a spectrin-like repeat domain, where the domain comprises n spectrin-like repeats, and contains no more than n spectrin-like repeats. Where n is an even number between 4-24, or a mucleic acid encoding a mini-dystrophin peptide. The mini-dystrophin peptide or the polymucleotide encoding it is useful as a medicament, for preparing a drug for therapeutic application and in the preparation of a composition for treatment of muscle disease, e.g. Duchenne's muscular dystrophy (DMD). This sequence represents a mini-dystrophin sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2119 CCAGAAGACGGAAGCATGGCTGGATAACTTTGCCCGGTGTTGGGATAATTTAGTCCAAAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     600
                                                                                     The invention describes a composition comprising a mini-dystrophin peptide comprising a spectrin-like repeat domain, where the domain comprises n spectrin-like repeats domains where the domain like repeats, where n is an even number between 4-24, or a nucleic acid encoding a mini-dystrophin peptide. The mini-dystrophin peptide or the polynucleotide encoding it is useful as a medicament, for preparing a drug for therapeutic application and in the preparation of a composition for treatment of muscle disease, e.g. Duchenne's muscular dystrophy (DMD). This sequence represents a human dystrophin polynucleotide sequence used in the creation of the mini-dystrophin peptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                        1 gagetatgeetacacacagg......taccagtetttagetgacet 1601
